The American Council on Education has granted immediate reinstatement of the criteria used by the Selective Service System during the Korean War for determining which students should be inducted and which deferred from military service. The ACE made the request in letters to General Lewis H. Hershey, Selective Service Director, in an attempt to provide a guideline to the local boards for classification of students.

During the Korean War deferments for students were classified in three major groups: those in class as specific on the selective service qualification test, without regard to their field of study, and the third group, in the lower quarter of their class were required to attain a certain score on the test in order to retain their deferment.

Dick Tsien '65

Dick commented that he felt he, as an MIT student, would benefit greatly from the balance offered by the local boards.

He also feels that many of his friends at Tech are equally or better qualified than many of the students who have come in contact with him on this basis also encourages students to apply.

Undergraduate record As an undergraduate, Dick received a B.S. in electrical engineering. He was placed on the Dean's List all 8 terms, and last term received the Karl Taylor Carnegie University Medal. Dick is currently working on his thesis at Livingston, New Jersey.

Dick, a Sigma Theta Pi, has two major interests: electrical engineering and philosophy. Dr. Shih-Ving Lee, who reviewed his doctoral thesis in 1965, is an associate professor of mechanical engineering at the University of Illinois.

Dick is presently working on a paper at the General Electric Research Center in Schenectady, New York.

Twenty Chimneys restaurant adds smorgasbord service on Sunday

By Ted Nygren

Finally there will be a restaurant open in the Student Center Sunday afternoon and evening. Beginning this weekend the Twenty Chimneys will be open Sunday from 3 to 9, serving a genuine smorgasbord.

The Chimmies will operate as a true smorgasbord service, and cold and hot food will be on a counter located on long tables for self service. At the present, the price of the smorgasbord will be 60 cents for adults, kids no charge.

Throughout the six hours of service, the menu will be completely changed continually. There will be hot, but, however, be accounted available continually, including hot and cold coffee or tea.

The opening of the restaurant Sundays is an experiment for Mr. Grossman, director of food and services in the Center, and the Student Center Committee, to observe student reaction to smorgasbord-style meals as well as student demand for more possibilities. The Sunday service, however, is considered a success and no students take advantage of the offerings.

Tsen awarded Rhodes; plans to attend Oxford

By John Corwin

Richard W. Tsien, Permanent President of the Class of 1965, has received a Rhodes Scholarship to study at Oxford University beginning October, 1966.

Tsien, who hopes to receive an M.B. in electrical engineering next month, will study at least 3 years at Oxford and is working towards his B. S. in Chemical Engineering and his B.A. in Biophysics. Although the duration of the scholarship is two years, frequently a student can receive extended aid.

Encourages applications Dick commented that he felt more students from MIT should apply for Rhodes Scholarships, on the basis of the idea that an MIT undergraduate is probably as well but very well-balanced. He stated in front of his interview panel that he felt he, as an MIT student, would benefit greatly from the balance offered by the local boards.

He also feels that many of his friends at Tech are equally or better qualified than many of the students who have come in contact with him on this basis also encourages students to apply.

Wilson basket decides game

Cagers top Harvard, 86-84

By John Kopelow

Junior Alex Wilson's 6-foot jumper with 8 seconds left to play gave MIT an 86-84 victory over Harvard Tuesday night at the Rockwell Cage. Wilson scored 34 points as Tech defeated the Crimson for the first time in 22 years. For MIT the victory has to be considered an upset. After having a disappointing previous week during which they lost two games in the Union Tournament, and after learning that their leading scorer,Brains, would be out of action for two weeks because of a virus, they could not be expected to rise to the occasion as they did.

This was Harvard's third in a series of frustrating two-point losses to Boston-area schools; they have also dropped games of that margin to Tufts and Northeastern, both of which are future opponents of MIT.

Complaints Earlier in the term, the Student Council and cold dessert Cool center held an open meeting for students to voice questions and air gripes concerning the Center's facilities, rules and regulations and possible improvements. These suggestions and questions were then discussed with appropriate faculty and cold dessert Cool center officials. Many changes and improvements have now been made due to these student ideas.

At the present time, the majority of work on the building has been completed. The bowling lanes have been completed. The bowling lanes have been completed.
