The purpose of the conference was to provide a place for those interested in social service work to meet others, and to find out what was being done in Boston by established organizations.

The morning general session featured a seven-member panel, with representatives from Boston, Roxbury, and Cambridge. The introduction was given by Bob McRae, director of United Community Services.

The afternoon sessions included discussion groups on tutoring, recruitment, and settlement houses. The conference was well organized and run by Dave Allen, the last president of the MIT-SSC, and Danny Beaudry, '68.

The MIT Social Service Committee and the Activities Council jointly sponsored a well-attended social service conference for the Greater Boston area. The conference, held Saturday in the Student Center, drew fifty-five representatives from 16 colleges.

MIT given $100,000

A grant of $100,000 was presented to MIT by the Campbell Soup Company. This grant was part of $35,000 given to 70 colleges, universities, and educational institutions. The value of these grants ranges from $500 to $10,000, and their use is unencumbered.

Science Reporter

TV series off to another good year

Science Reporter, a presentation of MIT, went on the air Thursday for the beginning of a 13-week educational series. The program is produced by NASA for WGBH-TV and is being distributed throughout the country by Bausch & Lomb.

Beaver Key to become Junior-Senior honorary

(Continued from Page 1)

The president may be in a position of responsibility and be outstanding, or may have exceptional promise, one additional term will give evidence about the student's ability to produce. The shift in Beaver Key's active period also allows for the election of the "one shot" American Optical and Bausch Lamb Lenses.

MIT chapter of the Society of American Military Engineers visit air defense missile site

The MIT chapter of the Society of American Military Engineers visited the Army's Nike-Hercules air defense missile site at Danvers, Mass. This gave the members of S.A.M.E., an organization of civilian and military engineers, an opportunity to observe radar tracks and to observe guided missiles which intercepted targets.
