a large number of major policy and senility have accounted for historical events. Attributing the ac-
calculus revolutionized physics.

By David Hoffman

'Georgy Girl' is the latest of the stream of offbeat, romantic melodramas that has been coming out of Great Britain recently.

The title character, played by Lynn Redgrave, is the antithesis of the usual fun-loving, slightly promiscuous heroine. She appears to have a congenital inability to

have fun. As the theme song has told us all before seeing the movie, Georgy seems unwilling to do anything, to start anything new, to take any chance. In re-
ality, she is a rather curious mix-
diet, who takes the course of the movie to find out that her con-
ception of him is not that of her

playful friends (and of the audi-
ence).

Rums a nursery

Basically, George's problem is that she only sees men the op-
opportunity to have children, instead of sex. She runs a sort of nursery for a horde of little kids, who are obviously her real

friends. Her roommate, Meredith, played by Charlotte Rampling, has a set of obvious assets and care-free social life which pro-

cause the laughter (which is

caused by many a viewer must con-
sider a rather unpleasant idea, cause the laughter which is

absurd, by the way) to be a

little bit uneasy.

The acting is good enough to

create a near-perfect illusion of reality, and the photography, though often creative, rarely in-

trudes. You may enjoy 'Georgy Girl', but even if you don't it will occupy your thoughts for some time.

In the end it is he and his money who are sacrificed to the will of the world. Georgy and the baby will be happy together, no everybody else will go on with the useless battle.

The theme is an old one, a favorite of Bernard Shaw's, more recently shown in "The Ching-A-Ling Bed." But a new twist is added. The modern world of the affluent society has forgotten the pes-

niam of Schoenauer's day, and the girl who is actually perfectly

suited for life in so minded by the trappings of the Playboy world that she almost never realizes o

Mr. John Wulff, Prof of Metallurgy.

The many electric motors in those offices

would provide a measure for the worst possible conditions. He deliberately set

out to ruin some ball bearings by

smearing them with an

icky guck called molybdenum
disulfide (MoS2).

Swack! This solid lubricant, used a certain

way, actually increased the life expectancy of the ball bearings by a factor of ten! Now the motors can run for at least a decade without lubrication.

We've learned from our "failures." Our aim: investigate everything.

The only experiment that can really be said to "fail" is the one that is never tried.

In the Bell System has many small, automatic

telephone offices around the country. The equipment in them could operate unattended for ten years or so, but for a problem.

The many electric motors in those offices

needed lubrication at least once a year. Heat from the motors dried up the bearing oils, thus entailing costly annual maintenance.

To stamp out this problem, many tests were conducted at Bell Telephone Laboratories. Lubricant engi-
near George H. Kitchen decided to do a basic experiment that would provide a measure with the worst possible conditions. He deliberately set

out to ruin some ball bearings by

smearing them with an

icky guck called molybdenum
disulfide (MoS2).

EVANGELICAL CHAPEL SERIES

WEDNESDAY, NOVEMBER 16, 7:00 P.M.
The last service in a series arranged to present basic aspects of the Christian faith.

SPEAKER: DR. GWYN WALTERS

Gordon College

TOPIC: "The Humanity of Christ"

"The one who makes men holy and the man who are made holy share a common humanity—he who became a human being so that by going through death as a man he might destroy him who had the power of death. He was pierced for our transgressions, crushed for our iniquities. The punishment for our peace was upon Him, and the compensation for our sins was upon Him. He himself bears our sins in His body on the cross, so that we might be holy share a common humanity— he
