In short, Professor Evans regards education as a process of learning how to find out what you don't know and how to get along with people, and believes that MIT has developed a fairly effective method for imparting such knowledge.

**IPC blood drive opens tomorrow, aids hemophiliacs**

"About 325 pints of blood should be collected to help the New York chapter of the Hemophilia Association this year by the IPC," stated Steve Shoel '66, Chairman of the annual IPC Blood Drive. The drive will be held Wednesday evening in the Sala de Puerto Rico in the Student Center from 9:45 to 8:00. Would be most successful if "This year's drive promises to be the most successful in the IPC's history, and at least twice as successful as last year's high of 294 pints with only a few casualties," commented Shoel.

He continued, "The success of this drive now lies in the hands of those students who have agreed to donate. Everyone must keep his appointment and the fewer the patients have returned permission cards his IPC representative should have notified him of appointment time by now. Students who volunteer to participate in this drive should make sure they arrive for their appointment as soon as possible and that they will be notified.

In short, the drive will produce a needed supply of hemophiliac patients in New England, and at the same time, be a valuable service to the community by the IPC."
