Letters to The Tech

Shelving problems

To the Editor:
The suggestion of Edward Cutler in his letter to the Editor, The Tech, Sept. 26, that a list of book titles should be made available to us on the system for Science Library Reserve books is a very practical one. The current procedure of having Reserve books "placed behind a barrier and that an attendant should check out books from the reserve" is a very time-consuming operation. We would like to see more Reserve books available in the Reserve Room on the main floor, opened to our students and faculty. We are sure that we could help ourselves.

We hope that the students in the Student Center Library will take advantage of the new book delivery service, which has been initiated because of the need for a new and more efficient way of handling books.

John L. Smith

TSE finances

To the Editor:

On the MIT campus student government activity is channelled and controlled by Technology Student Enterprises, Inc. This organization was formed to handle the excesses which we saw in the promotion of charter rights in the early sixties. As I understand it, TSE was also to provide financial assistance to students interested in the development of programs of value to the MIT community.

I must say that I was disappointed to learn that TSE has been involved in the activities you report in your story of Oct. 10. The interests of TSE are not always in the best interest of the community. It would be interesting to know what further role TSE will play in the future.

William N. Locke
Director of Libraries

College World

Psychology has just been established here at MIT and I believe the first course is being offered in the fall of this year. The course is taught by Professor J. W. Miller and is open to all students.

The course is designed to introduce students to the basic principles of psychology, with a particular emphasis on research methods. The students will learn about the experimental design and data analysis techniques used in psychology.

The course is required for all students majoring in psychology, and is open to all other students who are interested.

The course is taught by Professor J. W. Miller and is open to all students.
