Dostoevsky work to be discussed in Strelsky talk

Mrs. Katherine Strelsky will present a study of "The Riddle of Dostoevsky's 'Idiot'" Monday at 4 p.m. in the Harvard Library Lounge. The lecture is being sponsored by the Course XXI Society.

The study will be the conclusion of a lifelong study for Mrs. Strelsky. This year she hopes to complete a major book, called "Dostoevsky and the False Myth." The book, she said, will be "one of the most controversial insights about Russian literature of today." The book will be a Russian-English translation of Dostoevsky's notebooks for "The Idiot." Much more important, however, is the light this study will substantiate a re-evaluation of "The Idiot," as being crucial to an understanding of the novels that follow it. Mrs. Strelsky is doing the first American translation of Dostoevsky's notebooks for "The Idiot." The book is growing out of a project of comparative research in an academic environment. These are: competition for funds among the various research academies in this country, the methods to be used in the grad- uate education of the next generation of scholars and the methods of research in an academic environment. The CEA is funded by the AEC, and is not supported by the CIA or Harvard. At present, it is being described as "the largest laboratory — for pre-doctoral education at Harvard," by Livingston.

Cranes blown down at Eastgate

The truck and camper demolished by the crane (left) belonged to Professor Montgomery of the Department of Management. The crane was attached to a crawler-type truck (right), which was stationed at the Sloan parking lot.

The truck and camper were demolished by a crane that was to be used to remove section by section the horizontal counterbalance tower crane mounted on top of the building. The building itself was finished last week and work with the tower crane was to begin after the crane had been moved. The crane had been moved on a pickup truck with a cabling fixture that was used to connect to the electricity system which powered pumps. The crane was used to remove section by section the horizontal counterbalance tower crane mounted on top of the building. The building itself was finished last week and work with the tower crane was to begin after the crane had been moved.

MIT thinks of new NSA union regardless of CIA developments

As controversy rises over the recent disclosure that the National Student Association (NSA) had been receiving financial backing from the Central Intelligence Agency, MIT prepared to decide whether or not it should join the Association. Other CIA- NSA relationships were also discussed.

Specific goals which he suggested for Incomm included in- creased activity by the Committee on Student Environment, continuation of conferences, and at- tempts to get Incomm members more involved in the activities of some of the feedback groups.

Director of CEA resigns in conflict over research

Dr. M. Stanley Livingston, director of the Cambridge Electromagnetic Accelerator, has resigned in protest against the new government policy of research goals and priorities. Livingston said he is resigning.

These are: competition for funds among the various research academies in this country, the methods to be used in the grad- uate education of the next generation of scholars and the methods of research in an academic environment. The CEA is funded by the AEC, and is not supported by the CIA or Harvard. At present, it is being described as "the largest laboratory — for pre-doctoral education at Harvard," by Livingston.

Livingston has been a leader in the scientific community, and his resignation has been widely noted, particularly in Europe, where his work has been highly regarded. Livingston was born in 1916 and received his Ph.D. from the Massachusetts Institute of Technology in 1940. He served as a research associate at M.I.T. from 1940 to 1945, and as a professor at Harvard from 1945 to 1959. He has been a member of the National Academy of Sciences since 1951.

Livingston's resignation follows the recent disclosures by the Central Intelligence Agency about its financial support of the National Student Association (NSA) and the Cambridge Electromagnetic Accelerator (CEA). The NSA has been receiving about $500,000 per year from the CIA, and the CEA has received about $2 million per year from the CIA since 1962.

The MIT-NSA relationship has been controversial, and has been the subject of much discussion in the scientific community. Several MIT professors have expressed concern about the CIA's involvement in academic research, and have called for a moratorium on the CIA's funding of academic research.

MIT, however, has not made any public statement about its relationship with the CIA or the NSA. The MIT-NSA relationship has been a sensitive issue, and has been the subject of much debate in the scientific community.
