**Frosh matmen top UMass; 6 Techmen still undefeated**

By Mike Schibly

The MIT wrestlers demolished the University of Massachusetts last weekend. Of the seven mat contests of this most one-sided contest of the season, Massachusetts, reputed to have a fairly good team, was able only to win one bout and to suffer as they became the eighth victim of the Tech matmen this year.

Joe Barnes started things off for the engineers by pinning his man in 4 minutes and 27 seconds. Fred McCrory in the 177-lb. class pinned his opponent almost as swiftly, and Roger Flay, 147-lbs., won by decision. Dean Wethealen, 160-lbs., Rick Willoughby, 152-lbs., and Steve Chamberlain led enginee scoring with 26 points. The team record now is 7-0.

The Tech squish team brought their record to 4-4 on Friday when they defeated Trinity by split score. Bob Malcom, Manny Weiss, Rod Walker, Ken Gilbert, and Skip Perkins were the engineers responsible for the victory, which was decided by split in the final match.

**Skiers finish fifth**

By Rich Rosen

Hodge Bjaaland '70 took third place at the Eastern Intercollegiate Ski Association Senior Championships, at Williams College. This strong showing qualifies Bjaaland for the NCAA championships coming up in two weeks at Sugarbush, New York. Hodge will be the second NCAA appearance for Bjaaland, who was eleventh in the cross-country event at the Nationals last year. He is expected to do even better this year, as the 1966 team was held at high altitude in Colorado, and Hodge had trained in the East.

Meanwhile, the varsity participated in the New England College Carnival, placing a disappointing fifth of 6 teams. In the jump, MIT was last, with the best jumper, Bjaaland at Williams and Hans Fredinoff '63 Ill. Doug Cole '69 was the top finisher for Tech, coming in 14th of 23 competitors.

**ENGINES AND METALLURGISTS:**

Write your first name here.

Wouldn't you prefer to be known by this than by a number?

Consider a career with The Carpenter Steel Company. Although it ranks as one of the 500 largest companies in the United States, it is small enough in personnel that you'll be known at all levels of management by your first name and your contributions to its progress will be quickly recognized and rewarded.

Challenges come fast and excitingly at Carpenter. As a leading producer of specialty steels, innovations, improvements and new developments are constantly demanded from Carpenter metallurgists and engineers to serve America's most exotic industries —aerospace and electronics, to name but two. With ordinary tonnage-type steels selling at about $1,300 a ton, you can quickly understand the importance of your role in producing Carpenter metals with a price tag averaging $1,500 a ton.

As "Forbes" magazine states it: "Carpenter Steel is different from most other steel companies and devoutly wishes to remain that way." This runs against company profits to personal opportunities, advancements, and fringe benefits. Carpenter is an equal opportunity employer.

We'll be on your campus shortly for interviews. Consult your placement office for exact time and date. We'd like to start calling you by your first name and tell you more about the Carpenter "difference."
