The quickier the better. And the time has never been better for fast individual growth. The demand for our products has never been higher (111 new products and product families introduced by our divisions last year). And company-sponsored R & D amounts to over 11 million dollars yearly.

We make it as easy as possible for the creative individual to assume responsibility and move up. (Freedom to follow ideas through. Minimum of red tape. Lots of technical support and cross-fertilization of ideas.) And we have young scientists to prove it.

Each one of the 13 operating divisions functions autonomously, enabling each one to concentrate on its own product development and research. We've found it enables conflicts usually found in centralized corporations in which many products—and men—compete for management attention and action.

Openings in most locations for all degrees: market research, design and industrial engineering, sales management, marketing, chemistry, field sales, production engineering, accounting, systems engineering, finance, manufacturing engineering, and management.

Our representative will be on your campus soon to give you all the details about openings with any one of these 12 operating divisions across the country:

- Semiconductor Division, Mountain View, California 94043, (415) 962-2011
- Automation-semiconductor test systems: digital voltmeters; curve tracers; bench model semiconductor test and measurement equipment; solid state amplifiers.
- Controls Division, Hicksville, New York 11801, (516) WE 8-6000
- Potentiometers; pressure sensors; solar cells; solid state pressure transducers; ride gyros; accelerometers; heat conditioning equipment.
- Spaces & Defence Systems Division, Syosset, New York 11791, (516) WE 1-6500
- Photographic and electronic imaging systems for aerospace reconnaissance, battle scene mapping, close circuit television; counter-measures; fuzing, programming, timing, safety and arming devices; precision optical systems; basic and applied research in digital and computer techniques.
- Graphic Equipment Division, Plainview, New York 11801, (516) WE 8-5000
- Web perfoming offset presses; electronic color separation equipment; Electronic halftone engraving equipment; Teletypewriter Systems for automatic data transmission; Photo Typsetting machines.
- Cable Division, Joplin, Missouri 64801, (417) MA 3-1775
- Multiconductor cables; wiring harnesses; junctions, breakouts and terminations.
- Industrial Products Division, Plainview, New York 11801, (516) WE 8-6000
- Beam sound film projectors for teaching, training and display; 8mm single system sound recording film cameras and projectors; high speed motion analysis oscilloscopes and tape recording cameras; Aircraft cockpit voice recorder; flight data recorder units.

Your choice of locations is yours. We're interested in people with a proven background in engineering, and R & D. Our representative will be in your area to interview you. Please make arrangements in advance through your Placement Office.
