**Do you buy a shirt or a label?**

You buy both. The shirt because of what it looks like. And the label because of what it means. A good label means the shirt is styled to last. That it's tapered, pleased and rolled in the right places. Like this King Cotton Perma-Tone shirt, 100% cotton that won’t wrinkle. Label: "Sanforized." With a softly furred button-down collar, shoulder-to-waist tapper and box pleat. You can get it in stripes, solids, checks or plaid, $6.00 for short sleeves, $7.00 for long. But don’t buy a sport shirt just for the plaid, color, stripe or check. Get a good sport shirt with a good label. Our sports label is the best. Look for Arrow.

---

**MEDAL OF HONOR**

Top honors go to the Arrow "Gordon Dooner Club," in comfortable cotton Oxford. Button-down collar is softly rolled for a newer, neater but casual look. Trim placket front, and pleat in back are all in the best tradition. Comes in and out the whole collection now, in white or plain colors. 

5.00

Regular Hours: 8:30 to 5:30 P.M. Mon. - Fri., Sat. 9:30 - 6 P.M. Free Parking... On Saturdays at 3 spaces Parking areas adjacent to the Student Center.

**Harrington assails space policy following Soviet Venus triumph**

John V. Harrington, Director of the Center for Space Research and Professor of Electrical and Aeronautical Engineering, has praised the recent Soviet Venus 4 mission to Venus, and deplored the short sightedness of US planners which has limited our planetary exploration.

"Well we'd done it," commented Professor Harrington. He called the exploration of the planets the most important goal corresponding to the 1960's in the space program. He pointed out that the space probe, the Mariner 5 mission, which passed Venus Thursday, is the last of the series that the Voyager program may well be killed in Congress as an economy measure. But even that is the US space effort, says Harrington, is what concerns him.

According to Harrington, the Soviet Union is closely pursuing an extensive deep space exploration program. While the number of US earth orbit launches has exceeded that of the Soviet Union during the last ten years, the number of interplanetary launches will be nearly matched and has been about equal. It is thus clear that the Soviet's are now at a much more effective exploration of the planets.

Harrington commented on the data sent back by Venus 4, saying that he felt that it was exceptionally reliable. He added that the high pressures found by the thermal probe with certain models of the Venusian atmosphere based on radar measurements. The Mariner 5 probe, which passed Venus a day after Venus 4, indicated the presence of magnetic and other data which apparently contradicts some of the Soviet findings.

**An EVANGELICAL SEMINAR SERIES**

**Student Center — Thursdays 7:30 P.M.**

A weekly series of seven seminars arranged to discuss basic aspects of the Christian faith.

**OCTOBER 24, 1967**

**Rev. Ronald E. Miner**

First United Presbyterian Church, Cambridge, Mass.

"Shortcuts to Religious Experience: The New Mysticism"

The lived for LSD and oriental mysticism brings into the secular world a view of religious experience: a "mystical transcendence" found by means of pure subjectivity. How does this compare with the Christian's experiences of God at work in his life?"
