Ch.E.s at Merck... "You know that isothermal recrystallization process Dick Klophaus worked out?"

Dick Klophaus gets real satisfaction from the variety and sophistication of engineering needed to develop, design, and manage the processes required to produce Merck products. He and his Ch.E. colleagues get equal satisfaction from the knowledge that the end result of their work is a better life for more people, around the world.

For many engineers, it's an ideal combination. Add mobility... real opportunity for growth and promotion... real opportunity to learn and develop new techniques... Merck's liberal policies on benefits, graduate work, and professional achievement... Merck's outstanding sales growth (122% since 1957) and research investment ($46 million this year).

Add all these factors together, and you'll see why Merck attracts some of the finest engineering talents in the country. And keeps them.

How about you? Think about the engineering variety and sophistication required to produce the complex molecules used for pharmaceutical products. Think about the job these products are put to.

Then see your Merck Representative on campus.

Dick Klophaus, by the way, now supervises production of Vitamin C, Vitamin K, and various sulf products. His responsibilities, and those of other young Ch.E.s, are described in our new booklet, Merck: an engineer's career. You'll not only learn from this booklet--you'll actually enjoy reading it. Pick up a copy at your Placement Office, or write: Manager College Relations.

Talking Rock

By Steve Grant

This past week has seen the release of two albums that mark some sort of milestones in the career of one of the most talented people in rock. "Spencer Davis' Greatest Hits!" and "Mr. Fantasy" by Traffic comprise most of the highlights of the music produced by one Steve Winwood.

Spencer Davis Group history

The original Spencer Davis Group was one of the best and most popular groups in England. "Gimme Some Lovin'" hit number two there and seven here. It was one of the most exciting things ever to happen to hard rock. The dominant instrument is not a harmonica, it might be supposed, but a Hammond organ (in a class of its own, any organization will admit) with an odd setting (there are virtually infinite settings obtainable from this instrument), plus fuzz-tone and a slight three-second feedback frequency which makes the tone almost "still off the edge of the table." As an organist Winwood is unsurpassed at discovering wondrous settings which make a single sound of the instrument "blues in P" which Winwood, as was nearly all of the SDG's songs, is fondly said with some of the finest organ solos ever.

"Spencer Davis' Greatest Blunders!" These two songs, plus the follow-up single "I'm a Star" and the earlier "Keep on Fixing" are the best songs on "Spencer Davis' Greatest Hits," a most worthwhile album. Similarly, when Muff Winwood (Stevie's brother, a top bassist) quit the band to go into a private business venture, Winwood and his Ch.E. colleagues, now supervises production of Vitamin C, Vitamin K, and various sulf products.

...it's working out just fine.
