In the next few years, Du Pont engineers and scientists will be working on new ideas and plans to improve man's diet, housing, clothing and shoes; reduce the toll of viral diseases; make light without heat; enhance X-ray diagnosis; control insect parasites; repair human hearts or kidneys; turn oceans into drinking water...

and anything else that you might think of.

The 166-year history of Du Pont is a history of its people's ideas—ideas evolved, focused, and engineered into new processes, products and plants. The future will be the same. It all depends upon you.

You're an individual from the first day. There is no formal training period. You enter professional work immediately. Your personal development is stimulated by real problems and opportunities to continue in a small group, where individual contributions are swiftly recognized and rewarded.

City State Zip Code

American ingenuity is the cornerstone of Du Pont's basic philosophy. Principles of research and development are applied to all operations.

In Bruce Enders' campaign for Student Body President, an article in The Daily gave the impression that Secretariat was no longer to be a committee dealing solely with the mechanical workings of student government. Instead, it will coordinate activities and bring forward the general workings of student government. To encourage fresh student participation, Enders proposed a program of visits of the freshmen in living groups.

As remarked by George Kastis all, "Maria's election seems to indicate that the students at MIT want a drastic change in the direction of student government. If passing a motion to reconvene Executives Committee, the members of Inscomm have indicated that they too fear a change. With such a combination, this has the markings of a good year for MIT."
