Sculptures precipitate 'The Great Junk Robbery'

By Steve Leach

Reaction to the Park Place Exhibit ceased Friday evening at 5:30 when the Ad Hoc Committee on Environment presented the sculpture in Kresge Plaza and replaced it with a sign that proclaimed, "The campus is ours, by God; The Creation.

The Committee recommends that works of art be placed in any other places around the campus. The piece originally in the plaza was taken across the street to the Aero and Astro building; up to the building to a resting place in front of Professor Wayne Anderson's door. Professor Anderson is the head of the Committee on Visual Arts, the organization sponsoring the event.

Represent student views

A spokesperson for the Committee said that student opinion and that they have received only favorable comment on the action that they took. When asked why they removed the thing, the spokesperson replied, "Because it's ugly." The Committee claim that it has no money for renovation of the domes, while Wayne Anderson has unlimited funds in the campus.

When asked what the Committee plans to do in the future, they said, "If Professor Anderson wants to keep it in front of the Student Union Hall, he has to have an armed guard with it. We feel that the Institute doesn't take student views into consideration; this (Please turn to page 3)

Smith continues campaign against science requirement

By Bob Dennis

The Committee on Curricula decided that it could "bend" the science requirement but not break it. According to James A. Smith '69, this apparently meant that they were receptive to substitutions of a sort for the science requirement, but could not be cut entirely (such as 5.01 and 6.01) as Smith was requesting.

Don't reduce load

Similarly, the Committee seemed to accept the substitution of 6 and 9-hour subjects for the Distribution Requirement only if the total remained at least 36 hours. Smith terms this "ridiculous," since this would increase the number of students with only three subjects. The essential purpose of the petition, according to Smith, was to reduce the science load (to 60.69 hours) as well as to change the content of the "imperiously' required' load of 30 hours.
