Admissions office focuses on Blacks

By Dean Reeder

The problem of effective communication, fraternity housing, the Compton Awards, the reorganization of Student Union and student participation in faculty committees were discussed at an all-faculty meeting on Student Environment (CSE) and the Student Union last night. The second joint meeting began by accepting a proposal made by Professor Morrison at the last meeting that will hopefully provide a means for the students to better understand the process by which decisions are made in areas of student concern.

Professor Morrison suggested the following means of solving the problem: (1) an effort which has been underway since last October; the Executive Committee has been meeting to determine the work to be done. The task is being coordinated by Assistant President Prentice Hall, the admissions office and departments, and in the future it will be in the hands of the Student Union.

The program itself is a dance spectacular featuring Gus Solomons Jr. displays modern dance techniques under the light of a strobeoscope. He will star in a WGBH stereo telecast of a dance spectacular entitled CITY/MOTION/SPACE/GAME being broadcast on channels 42 and 2 tonight.

The program, entitled CITY/MOTION/SPACE/GAME, consists of two different types of stereo telecasts to be broadcast this week at the same time. The station recommends placing two television sets side by side to view the broadcast. In addition, the radio tracks will also be available through a stereo FM receiver for enhanced listening.

The program itself is a dance spectacular featuring Gus Solomons Jr., a 1961 graduate of MIT, who will star in a production which will be telecast in the Tool Show. Last summer he was a dancer with Merce Cunningham, a respected and important modern dance teacher.

By Robert Dennis

Prof. Franco Modigliani of the Department of Economics and Management, 80, is known as the most knowledgeable of all the economists at MIT. In the recent past he has been approached by many economists around the world and has, through his work, become known as one of the leaders in the field of economic theory. His work has been published in a number of important journals and he has received many awards for his contributions to the field.

The conference is to be held at the Naval Academy in Annapolis, Maryland, and is expected to bring together economists from around the world to discuss various topics related to economic theory and policy. The conference is sponsored by the American Economic Association and is expected to attract a large number of participants.

The conference is expected to begin on Monday, October 6, and is scheduled to conclude on Friday, October 10. During the conference, participants will have the opportunity to present their research and engage in discussions with other economists. A number of keynote speakers, including Modigliani, are expected to present their work.

In an analysis of the current situation, Modigliani has stated that the recent surge in prices is likely to continue for some time to come. He has also expressed concern about the potential for a further increase in inflation, which could have serious implications for the economy.

Modigliani has suggested that the government take steps to reduce the money supply in order to combat inflation. He has also called for increased taxes on high incomes to help reduce the budget deficit. However, he has also emphasized the importance of maintaining economic growth and has suggested that the government take care not to stifle the economy with too much regulation.

In conclusion, Modigliani has stated that the current economic situation is complex and requires careful consideration of a wide range of factors. He has urged policymakers to take a balanced approach to addressing the challenges facing the economy and to work together to find solutions that are both effective and sustainable.
