**STUDENTS DISCUSS SOCIETY**

(continued from page 1)

the sciences, a Science Action Coordinating Committee is planning research stoppages at schools around the country for March 4. The work strike is called, not against the schools where research is carried out, but instead to "correct scientific and engineers to scrutinize political and, moral considerations before working on research financed by the military," and to point out the shortcoming of non-military research opportunities.

At MIT, a faculty group, the Union of Concerned Scientists, is helping to coordinate events. Teach-ins are being set up. Plans are under way to send delegations to community officials to discuss ABM, channeling of scientific manpower, convention from war work and other related topics.

At Yale University, Dr. Robert Lifton, a spokesman for the March 4 stoppage group, says the day is planned to "critically examine the dangers of corrupting scientific research." Lifton also says that particular emphasis will be given to the social and ethical implications of defense research in biological and nuclear warfare.

Yale students indicate that the day may become a university-wide teach-in. Government people have already been invited to participate.

At physician return from the New York meeting, more campuses are setting up local groups to coordinate a work-stoppage.

March 4 may signify the biggest single act of social awareness in the scientifics since Dr. Robert Oppenheimer and others in the late '40's tried to alert the government about their own invention, the nuclear bomb. "But," adds one physicist, "it will be a long time before we get all the scientists out of the labs and into the streets."

**ENGINEERS:**

Good ideas get off the ground at Boeing.

So do careers.

Let's talk about it on Wednesday through Friday, February 26 through 28.

At The Boeing Company, you can be a member of a team that's famous for making good ideas fly, such as the 707, America's first jetliner. And the 727 trijet, the 737 twinjet, Boeing-Vertol helicopters, the Boeing-built first stage for the National Aeronautics and Space Administration's Apollo/Saturn V moon rocket. And the NASA Lunar Orbiter, the USAF Minuteman, and the USN hydrofoil gunboat Tucuman.

Boeing has exciting new projects on the way, too. The 747 superjet, world's largest and fastest commercial jetliner, scheduled to make its first flight by the end of 1968. America's supersonic transport, now being developed at the company's Commercial Airplane Division. Plus other advanced programs in early development and on Boeing drawing boards.

They can help get your career off to a dynamic start in applied research, design, test, manufacturing, service or facilities engineering or computer technology.

Visit your college placement office and schedule an interview with the Boeing representative. Boeing is an equal opportunity employer.

**TIME IS RUNNING OUT...**

Each minute you spend in indecision is a minute wasted ... a minute that adds up to an hour or a day that has vanished forever.

That minute may have been spent as Paulists do, counseling a questioning youth at a secular university, working in ghettos, saving a potential "dropout" or promoting better understanding of the Church and all religions.

How do you minutes stack up?

If you have given some thought to becoming a priest, why not find out how the Paulists spend their time and send for an illustrated brochure and a summary of the Paulist effort for renewal in the Church.
