JOPLIN - After a successful weekend at the Common was punctuated by 1,750 from Northeastern. The march to 77 Mass Ave at 1:50 pm, and walked across the Harvard Bridge. Turning into the back of the march, students and other members of the community were welcomed with the chant: "Back to the people..." "Open Status Debated"

Group to report by May 31; no action on research halt

By Greg Bernhardt

The relationship between MIT and its special laboratories will come under serious review at a special meeting Friday by President Howard Johnson. Johnson announced the formation of the 16-man commission at a meeting of the Faculty and Administrative Councils. The special commission is being directed by Professor William H. Pounds, Dean of the School of Engineering, including students, faculty, Corporation members, instrument makers, and Lincoln Lab personnel.

The meeting, which began shortly before one, was open to all faculty members. About a half-dozen, students and other members of the community attended. Billings Road 10-250 to standing room only. About 15 SACC members were asked to sit down and make out Joseph's office. President John prior to the opening of the meeting.

First move

The new of a moratorium was the first move by Johnson on the issue of the special labs since the spontaneous meeting Thursday afternoon where he promised to begin action on a "review and re-examination of the relationship of the Institute to national defense by the end of this week." The moratorium on research was taken.

In his remarks to the faculty, Johnson explained that the idea of establishing a panel is the appropriateness for Institute sponsorship of the laboratories, the decision-making process by which new programs are accepted, the relationship of these labs to on-campus research and education, and in general, the long-standing policies and procedures with respect to public information which are the action on research on was taken.

Open Status Debated

The plan is to have speakers present facts and ideas at meetings of the panel next week and for the next month. The plan was received by the panel head of the panel. He called for open discussion on the panel. Pounds voiced concern that "the panel has access to the best information possible on which to base its recommendations." The fact was that "a "window" might be opened in his presentation before a large group as a small, intimate committee. Pounds expressed the hope that this action may serve as an example for universities across the country.
