First strike

The current discussion of the role of defense research at MIT comes at a time when there is an enormous amount of ambiguity in the strategic arms race.

Deployment of MIRV and ABM is being justified in terms of the need to safeguard a second strike capability. The SS-9 is seen as a first strike weapon because of its higher accuracy and greater payload than previous models, both prerequisites for effective retaliation against a nuclear attack.

In that case, we will have to take some sort of action to preserve our deterrent. The least expensive action to take under those circumstances would be to deploy Poseidon missiles (equipped with L-Iab's MIRV) on our Polaris subs. While we do not favor deployment of MIRV and ABM, we believe that the system be ready to go if Soviet intentions prove unfavorable. To self-destruct; I don't accept that.

While we find it difficult to defend some of the projects now and cloudy, is well outlined, even if we have deployed MIRV, and they tably I must report that it will not be possible, as everyone else suggests, to go on living in relative peace.

Your sincerely,

Brothers and Sisters,

This past week news and headlines dominated our lives. Someone once observed that life is like a car driving along a road with fog hanging heavy. The road is covered with a map indicating the road you are to travel. However, for the first time, there is no information on what the next turn may be or what the next mountain might be. This is what the road to the future looks like.

The road has come to a fork. It is at this fork in the road that we must make a decision. We must either continue with our present course or change direction. The decision we make will determine the future of our society.

We are at a critical point in history. The world is in the midst of a serious crisis. The crisis is not only economic, but also political and social. The world is facing a choice: to continue down the path of destruction or to turn towards a path of peace and understanding.

The choice is ours. It is up to each individual to make the right decision. The future of our world depends on it.

Sincerely yours,

[Signature]

The prime evidence offered in the case supporting the hypothesis that the Soviets are seeking a first strike capability is the continuing deployment of the SS-9. The SS-9 is a new type of intercontinental ballistic missile (ICBM) that includes multiple independently targetable reentry vehicles (MIRV). This system is intended to provide the Soviets with a greater ability to survive nuclear attacks.

The deployment of MIRV and ABM is being justified in terms of the need to safeguard a second strike capability. The SS-9 is seen as a first strike weapon because of its higher accuracy and greater payload than previous models, both prerequisites for effective retaliation against a nuclear attack.
