Coalition satisfied with march's outcome

BLACK PANTHER BLASTS TACTICS OF NAC LEADERS

Immediately after returning from L-Lab 5 yesterday morning, the NAC held a meeting in the Sala to evaluate what had happened. Dr. C. Stark Draper, director demonstration from the roof of L-Lab 5, watched the NAC protest by Steve Saunders

The petition, drafted by Prof. Francis Low of the Physics Department, was announced at a press conference yesterday morning in Kresge Little Theater. The meeting, chaired by Prof. Kenneth Hoffman of the Math Department, was open to interested faculty members and anyone else who wanted to come. Among the members of the faculty present were Nobel Prize winner Salvador Luria (Biology), Jerome Letwin and Noam Chomsky. About 100 people attended in all.

There was some objection to the wording of the first line of the petition which referred to the "November 4th demonstrations." Some felt that it connoted disapproval of the November 4th demonstrators. The petition will be circulated among the faculty and corporation to stop any part of a stable deterrent. With such accuracy, each warhead in a MIRV-ed missile could reliably find and destroy an enemy missile, even in its hardened silos. Thus, the program has the appearance of an attempt to achieve first-strike capability, an idea to be interpreted by the Soviet Union.

"The coincidence between the first diplomatic measures towards arms limitation and the serious reexamination of war related research at MIT gives us a special opportunity and a special responsibility: Let us at least defer all work to improve the accuracy of MIRV missiles. Let us, by a strong public statement, point out to Americans that such weapons do not add to our security, but undermine it. "There will not be any more chances. Next June may be too late. We must for once accept the judgement of informed and responsible men against the arms race. The MIT faculty and corporation, by a firm public position, can perhaps help end a danger as great as men have ever faced."

Black Panther Blasts Tactics of NAC Leaders

Cole Blames MIRV halt

By Bob Dennis

In press conferences yesterday afternoon and evening, Associate Provost Paul E. Gray disclosed that a memorandum had been sent about a week ago to all L-Lab employees instructing them not to attempt to break through an obstructive picket.

Grey asserted that the Institute had not yet determined whether the obstructive picket at L-Lab 5 constituted a violation of MIT's injunction against the NAC. Dr. Gray said that he was not sure whether the injunction applied to actions in the Cambridge streets. He declared that he was hesitant to apply the word "violent" to the demonstration.

He stressed that MIT was not responsible for summoning the police, but it was brought out that Institute officials had been in communication with City Manager James L. Sullivan during the morning.

When questioned about the massive nature of the police force that arrived, Prof. Gray noted that it was his opinion that "a show of force in the beginning usually pays off in the end."

He reported that two injured girls had been taken to Mt. Auburn Hospital with scalp lacerations. Five persons (two MIT students, two non-students, and one former student) were admitted to the MIT infirmary. A small number were taken to Cambridge City Hospital with minor injuries.

Professor Jerome Letwin was among several faculty members who addressed the crowd before the police moved in to break up the NAC demonstration.
