SACC LEADERS ASSESS VALUE OF CONFERENCE

By Alex Makowski

"Perhaps the biggest success of our conference," said SACC organizer Leon Shiman, "was the widespread representation of various viewpoints. I have to thank those who presented unpopular ideas, for they presented them in a reasonable and open manner."

In attempting a preliminary evaluation of the conference, Shiman added, "All the speakers agreed that radical political and social action would be necessary. Shiman attacked this "lack of understanding of how the many diverse points of view are connected." He went on to say, "I am just wondering how the Institute's commitment to a two-week period might be made more relevant to our conference."

The conference, which ended Thursday evening, was an attempt to provide an open forum for discussion on various viewpoints. The conference was sponsored by the MIT Student Association for Concerned Citizens (SACC), which is the only organization in the country that focuses on the problem of nuclear energy. The conference was held in conjunction with the Massachusetts Institute of Technology and the Massachusetts Institute of Technology, which is the only university in the country that has a program on nuclear energy.

Albert appoints Wattel to vacant UAVP post
