The task of giving man greater control over his environment has greatly added to this diversification. Since the aerospace industry, utilizing advanced technologies, has developed into a permanent, flexible and highly diversified industry. This need to apply the aerospace systems approach to pollution control, mineral exploration, environmental planning, agriculture, forest management, desalting of sea water, modern transportation, air transport and control has greatly added to this diversification. Since the aerospace industry is not directly geared to the consumer, its benefits are social... national survival on one hand... a better life on the other.

The new Eco-systems endeavor at Grumman is ideally suited to the task of giving man greater control over his environment because of the Life-support Systems experience gained from the Lunar Module and underwater submarines. Positioned in the forefront of this remarkable industry and led by the ideas emanating from its own advanced planning, Grumman pushes the aerospace art forward in deep-sea submarines, hydrofoil seacraft, advanced aircraft including business transport, lunar landing vehicles and space stations.

It’s only natural, in a company that has quintupled in size in the last decade, that professional and management responsibilities would proceed apace. Wide Open is the word at Grumman, and the message for Engineering, Math, and Business Administration majors. Problem solving is the way of life in Engineering, Research, Environmental Management and various business-oriented areas.

Can you provide cogent solutions?

Grumman is situated in Long Island, 30 miles from N.Y.C.

The white sand beaches of the Atlantic are 12 miles away... the famed sailing reaches of Long Island Sound, an eleven-mile drive... five beautiful public golf courses right in Bethpage—2 minutes from Grumman.

Grumman representatives will be on campus

an equal opportunity employer (M/F)

The second half was basically more of the same. At the 2:30 mark, BU's top scorer, left inside Dave Nusmeh scored his first goal on a penalty kick. The kick resulted from two Tech full-backs having tackled BU forward on a breakaway. For the next fifteen minutes, the Techmen had several opportunities to score, but converted on none of them. The best chance for a score came from co-captain Dave Peterson '71 who blasted a line drive shot off of a bouncing ball. The shot was about from 30 yards out, and it hit the upper crossbar of the goal. The best chance for another Tech goal came at the 21 minute mark when Nusmeh scored his second goal of the game.

In the fourth period, BU went ahead at the one minute mark to make the score 6-0 and then score with just a minute remaining in the game to make the score 7-0. The shots on goal for the game reflected the score; BU outshot the Techmen, 31-12.

The soccer team will try to bounce back from its three straight setbacks tomorrow at 2 pm on Briggs field when it meets Amherst.
