Students face rising costs

(Continued from page 1) The only kind available scholarship source, is aimed at the extremely poor. "And we are more aware of the needs of the very, very poor at other universities. Unless there is a change of philosophy at the Federal level, scholarship grants don't appear to be in the Federal Tax reductions direct grants to students of all needs and abilities would be far less than their present level on the horizon, however," continues Mr. Frailey.

Furthermore, the student will receive $1,000-$2,500 in grants and scholarships. This is not true for the student in the life sciences, where the only possible source of financial aid is work-study. Given the state of the economy, many students are forced to defend their education by working long hours of a minimum wage. The main drawback of this is that they barely earn enough to earn grades for the time they are working.

The Federal Government has seen a big increase in the number of students applying for aid. In 1964, 14 million students were eligible for aid. This number has swelled to 24 million in 1971. Unfortunately, this is because the government has made it easy to receive aid. The government has made it possible to receive aid by making the application process simple and accessible. However, this has also made it possible for many students to take advantage of the system.

One possible solution is to increase the amount of aid available. Another is to increase the number of programs available. The government could also make it more difficult to receive aid by increasing the amount of paperwork required. This would make it more difficult for students to receive aid, but it would also make it more difficult for the government to overspend on aid.

New Institute office pools media services

(Continued from page 1) useful background material for all three undergraduate papers.

New office

The newly created news office will serve the pressing need to deal with the outside media. At MIT's role in both government and civilian research has swelled during the past decade, so has the job of disseminating information and to assist in coordinating coverage by the local and national press. As Byers, himself, a recent recipient of service on both metropolitan daily and the wire services, noted, the recent instrumental MIT role in correcting the malfunction that threatened the moon landing cost the PR director two complete days. Newspapers across the country, magazines, Walter Cronkite - all wanted interviews and information on the Draper Labs engineers. As new office director, Byers will be free to deal with similar future demands while other administrators handle such internal matters as the annual course catalogue and the weekly information publication.
