MIT for some years now, and as Dean, had the ability to both think creatively and develop applications. Background Much of their potential rests with their background. Both have been close to the operations of MIT's two largest and most important schools, Wiesner as Dean for the School of Science and Engineering and Gray in his brief tenure as Engineering dean. Their familiarity with the needs of research in these two broad fields and experience in dealing with their faculty should lend more authority to their suggestions than President Johnson might have hoped for. What policies are the two men likely to follow? Much of the details will have to be filled in over the next few weeks. Wiesner said that he wants to hold at least one news conference Friday and a look at some of the appointments that indicate some general directions. The community can expect, for example, more discussion and emphasis on work that cuts across the present departmental structure: “We must build up interdisciplinary focusing,” Wiesner commented.

MIT Red Cross

BLOOD DRIVE

March 9-19

Sala de Puerto Rico MIT Student Center

To make an appointment:
* Come to the Sala de Puerto Rico
* 2nd floor, MIT Student Center
* Fill out a form at our booth in the lobby of Building 10
* Call extension 7911

For information, call X7911
