Honesty isn't always the successful play

By Daniel Reinhartz

The basic premise of this in-
fant column is that bridge is a fun game which should be enjoyed, that one should, have a wide following here at MIT. I intend to discuss one entertaining and informative hand per column, but will also answer questions. Please send all questions, comments, and hints to Dan Reinhartz, Rock Hall, Room 407.

Today's hand provides an illustration of the wide scope of possibilities open to a nimble-minded declarer, having rather straightforward, and the opening lead against the game contract of clubs. Before reading on, study the hand thoroughly on the declarer; how do you proceed?

The actual declarer made the mistake you have probably

will help the secretariat so that they don't have to spend much time rephrasing in this student's mouth. After all, it was not at all phrasing in this student's mouth. After all, it was not an original

2) Failing to identify Diane Balsar as a co-instructor of the course, resulted from lack of information.

3) Obviously, the source of information was the single male student who was assigned to the project. No attempt was made to imply that the women students were inferior, but when it came to Mrs. Balsar never showed up at all.

Dr. Irving Cushner presented his thesis on the effectiveness of the different methods of "preventing birth" against the background of the total picture of human sexuality. From the "psychological development to" birth.

Chemical contraceptives, Cushner related, have a prevention of pregnancy, followed by five per hundred thousand for surgical sterilization.

Cushner discussed the effectiveness of each of the methods, with the results being: "Coitus interruptus," while the female, "occlusion of the fallopian tubes," is a very effective method. Cushner also added that a new method being developed has been very successful and can be performed in only 15 to 20 minutes on an outpatient basis.

Oral contraceptives, "the pill," Cushner continued, prevent ovulation by causing the pituitary gland to alter production of the hormone that brings about menstruation.

The final method in this group of methods is sterilization of the male. Its Pearl rating, he noted, is .003. Cushner concluded, "this is the most effective method. Cushner emphasized the necessity of the discussion on the operation.

"Several methods exist to prevent the sperm from gaining entrance to the cervix" after they have entered the vagina. Chemical preparations, Cushner noted, have either immobilized or killed the sperm, but must be placed in the vagina no more than five to six day hospital stay. He also added that a new method being developed has been very successful and can be performed in only 15 to 20 minutes on an outpatient basis.

Cushner, however, reported that the procedure was increased from ten to 12.

Surgical sterilization of the female, "occlusion of the fallopian tubes," is a very effective method. Cushner noted that until recently it involved abdominal surgery resulting in a four to six day hospital stay. He also added that a new method being developed has been very successful and can be performed in only 15 to 20 minutes on an outpatient basis.

He also added that a new method being developed has been very successful and can be performed in only 15 to 20 minutes on an outpatient basis.

Oral contraceptives, "the pill," Cushner continued, prevent ovulation by causing the pituitary gland to alter production of the hormone that brings about menstruation. While oral contraceptives have some noticeable effects, they should not take without a prior medical examination. Cushner noted that until recently it involved abdominal surgery resulting in a four to six day hospital stay. He also added that a new method being developed has been very successful and can be performed in only 15 to 20 minutes on an outpatient basis.

The correct play would have been for declarer to ruff the club lead in his hand with a low heart, followed by cashing the king and queen of hearts, and the queen of spades. East would have to play a heart, allowing declarer to cash the queen of clubs.

Cushner, who is writing the constitution to be presented to the GA, noted that he was combining some of his own ideas with used ideas in the HAC constitution of 1964.

He went on to say, "there is a difference in the direction that just haven't gone out to the students over the past few years." In general, "while we've got a clear process by which one files a request adequately described, "I don't care who hasn't done it, I think we should." Cushner also noted that the planned system would not decrease the number of people receiving aid in government, but would "result in people going.

New England Conservatory presents
John Hsu, viola
Luis Bagger, harpsichord
Telemann, Couperin, Bach
Jordan Hall, March 15, 1971
