The Concourse Experiment, the newest of the experimental study programs, was recently given approval by the Corporation's Educational Policy Committee. Concourse is to operate in 1971-72 and is now in the final stages of planning.

To further inform the faculty of their plans, the Concourse staff held an open meeting last Friday in the Building 35 Lounge and answered questions by interested faculty members.

Professor Louis Bucciarelli, one of the initiators of Concourse, answered questions concerning the method of teaching the freshman science subjects. He pointed out that Concourse will cover the basic first-year subjects at the same level as the normal first-year program - the difference will lie in the topics and emphasis on 'well-rounded' education.

He added that his hope is that the subjects will be taught enough in the satisfaction of the staff and of the different departments that formal credit can be given just as though the student had taken the department's regular courses.

Bucciarelli also pointed out that Concourse will have a more structure and ruled direction than the Unified Science Study Program (USSP) and the Center for Inquiry into the Sciences.

"If you look at an MIT on-line educational institution, you'll notice that below the vice presidential level, you're not sure who reports to whom. It's very informal. We don't have an administration building that 'looks good.' We may even think of it as a 'focal point' from which information on the varying price offensive could be obtained. The center, he explained, is being run by an ad hoc group of faculty and students to serve the community.

The principle concern of the group, Bell added, is a Tails program, the last of its kind at MIT. The Common rally is being held to commemorate the deaths of two students last year, those of David Dillingar, Sen. Vance Hartke, Howard Zinn, and representatives of the NATIONAL Student Mobilization Committee, the Peace Information Center, the Catholic Peace Fellowship, the United Farm Workers, and the Mass Welfare Rights Organization, as well as representatives of Labor and Women's Liberation. In addition, a member of Mayday will report on the activities in Washington.

Prior to the Boston-wide rally, there will be a 10:30 rally at MIT. Professor of Physics Bernard Feld and Professor of Biology Salvador Luria are slated to speak at MIT, with Professor Philip Morrison acting as chairman. Following the rally, there will be a march to the Common. Bell pointed out that people "working through the center" have been "very informal. We don't even have an administrative system probed to determine better systems of operation. In addition, a member of their plans, the Concourse staff held an open meeting last Friday in the Building 35 Lounge and answered questions by interested faculty members.
