MIT's Sea Grant evaluated

By Jim Moody

A site visit was conducted in the MIT Sea Grant Office. The purpose of the annual visit is to evaluate MIT's current programs and proposals for expansion. Here is a summary of the findings:

1. The National Sea Grant Program encourages and supports projects in marine resources development, pragmatic programs in marine education, research, and advisory services.

2. MIT's involvement in marine research has been lengthy and extensive. Currently, 138 graduates are enrolled in the Department of Nuclear Architecture and Marine Engineering (XXIII), the first of its kind, started in 1963. The Department of Civil Engineering has developed extensive programs in coastal engineering in the last twenty years. Before 1960, the Department of Earth and Planetary Sciences and the Department of Metereology established a joint program in oceanography. For more than a decade, the Department of Nutrition and Food Science has been working on fish protein concentrates and the development of seafood technology. Since the early 1940's, the EE Department has been pioneering the development of solar techniques, and has been working on underwater photography since the 1950's.

In recent years, MIT has become increasingly more involved, especially in interdisciplinary development.

Women's rights by law are discussed at forum

(Continued from page 1)

Women are also not permitted to serve if "it appears to the taking justice that she would be disheartened by the inquiry or by discussing the case in the press room." This ruling (according to Kanners) "that women can undergo physical insult of rape but women are not able to bear it." This rule keeps women off juries in both rape and abortion cases, and especially in these cases this is very bad, as this cannot possibly underlie the crimes themselves.

Whether or not the defendant is being tried by a jury of peers, Kanners said that on the whole, these precautions are moving very slowly for women, especially on the national scene. There is at present an abortion bill before Congress, which will probably not even get to the floor, but more importantly, for the first time, the Equal Rights Amendment has come through the Senate Judiciary Committee with a favorable recommendation, and will now go to the floor of the Senate. To help it pass, people are urged to write to their senators.

In Jim Price's own words: "It's just an expression of freedom."

The freedom that comes after years of playing trumpet and trombone with Delaney and Bonnie, Joe Cocker, George Harrison and the Rolling Stones.

Kids nowadays ain't got no shame.

The freedom to go beyond just the horns to also play organ and sing on your first solo album.

The freedom to call that first album "Kids nowadays ain't got no shame."
