Coach Farnham resigns

By Sandy Yolles

This will be the last year at MIT for Arthur (Art) E. Farnham, Jr., Head Coach of the track and cross country teams. He has coached these teams for 16 years, and has been respected by coaches throughout New England. This can clearly be seen by looking at some of Farnham's highlights:

Farnham was selected by the US A.A.U. and the State Department to coach a team of US track stars touring central and west Africa.

When interviewed, Farnham said that the decision to leave MIT had not been an easy one. He said that he had enjoyed his time here very much, and that he would miss a great deal the camaraderie which he had found here. He added that he thought that MIT has the best athletic department of any college in the US, and that the teaching aspects of his job (MIT coaches have teaching responsibilities in the Physical Education program) is "true at the majority of schools"

Farnham is leaving MIT to pursue a full-time commitment to a summer camp that he has been working at for over 20 years. He has only worked on the camp part time during the school year, but he feels that his new occupation will provide him with a more leisurely life. He also welcomes the opportunity to live on Cape Cod all year long, as he says that he has felt a great love for the Cape ever since he first was there 33 years ago.

After speaking with him, one cannot help but join all those who wish Coach Farnham the very best in all that he may do, and fondly bid him farewell.

**POLICY AND CONTENT**

It appears to us that we can get thrust from a device with shifted pistons and shift masses without ejecting gas or other propulsive fluids. This is done by using a piston chamber composed of an infinite number of equal masses. A mechanism to position these masses linearly aligned and separated by a frictionless surface. The position of the piston chamber is set when the desired mass is reached, and the piston chamber is then shifted. The resulting force is applied to the object to be moved.
