CIS Gets Ford Grant

The Ford Foundation is preparing to award MIT a $500,000 grant for research and training in arms control and national security studies, as part of a broad program aimed at training a new generation of arms control analysts.

The grant will be awarded to the MIT's Center for International Studies (CIS), and CIS Director Eugene Skolnikoff said Thursday the four-year program will involve students and faculty from a number of academic areas.

The money will support arms control studies, which have been taught at MIT. But a dozen faculty members involved included Professors George Katzenstein, William Kaufmann, and Donald Smith, from the political science department, and John Dye of chemistry, as well as CIS Assistant Director Amelia Leiss.

A special offer to College Students.

Arms Control Studies
Funded by Foundation

CAMBRIDGE, Mass., Sept. 15 (AP) - The Ford Foundation has awarded grants totaling $1.6 million to Harvard University and the Massachusetts Institute of Technology for arms control research. Robert Zollars, a spokesman for the foundation, said that Government funding for arms control was cut by one-third, and the foundation appropriated $1.6 million for such work.

He said that Cornell University has been granted $500,000 and that $1.5 million remained unallocated. The foundation approved awards of $21.1 million to Harvard and $500,000 to M.I.T.
