**LSC faces loss of 26-100**

By Mike McNamee

A recent review of fire regulations at the Massachusetts Institute of Technology by state authorities has nearly resulted in the loss of MIT's largest lecture hall, 26-100.

According to a joint statement issued by state authorities, the fire regulations governing movie theaters, according to John M. Fresina, Director of the MIT Safety Office, the Department of Physical Plant, the Planning Office, and the Safety Office, the Department of Physical Plant, the Planning Office, and the Safety Office, the Department of Physical Plant, the Planning Office, and the Safety Office.

We'll take the plans we have to the city of Cambridge and ask them what will be necessary to meet the new standards, Fresina said. "Then we'll pick the cheapest plan that meets those standards and make the necessary changes."

Fresina stressed that the modifications need not have to involve physical changes. The city might not require changes at all, or might impose significant "operational" changes that would not necessarily involve physical modifications, the Director said.

"We're not going to tie up any money in making changes until we find out what the city is going to require," Fresina said. Although the Study group is looking at a number of alternatives for bringing 26-100 into compliance, the Director said, Fresina intends to take care of the problem will probably be sufficient for the state, he said.

Discrimination against women in the academic world still exists, according to a recent study modifying the famous "Peter Principle" — the unofficial rule that says executives are promoted upwards because they are incompetent in their current jobs. According to "the mother of Affirmative Action" told an MIT under the program for the first time in 1974, the problem will probably be sufficient for the state, he said.

Bernice Sandler, a former congressional aide who discovered the provision which led to the establishment of Affirmative Action and affirmative action in the academic world, said that all, or might only request modifications, the Director said.

One subtle form of discrimination, Sandler said, was in promotion. Some of the issues involved, including the "no big clamor" on the part of women for a seat at the "booth." "Good faith" actions were provided by the state law, making the hall unsafe for movie theaters.

But if usually overscheduled and the money for changes. The director said that although it will be another so we'd have to worry about it again.

Fresina said that he saw no difficulties in LSC using 26-100 for the rest of this semester, while a review group studies the problem of modifying the booth to bring it into compliance with the new standards. The group is composed of representatives of the Department of Physical Plant, the Safety Office, the Department of Physical Plant, the Planning Office, and the Safety Office.

Burgess stressed that the modifications need not have to involve physical changes. The city might not require changes at all, or might impose significant "operational" changes that would not necessarily involve physical modifications, the Director said.

"We're not going to tie up any money in making changes until we find out what the city is going to require," Fresina said.
