Although none of this year's IAP activities attracted the attention last year's yo-yo did, there was more than enough activity to keep everybody happy. Prof. Ralph Burgess developed a "Bicentennial Floating Dome" which is due for completion in February and will appear over city hall in April. The ever-popular glass-blowing classes taught students some practical skills. Another group worked on a lightweight aluminum bicycle frame. For the less serious, President Wiesner and Chancellor Gray hosted an IAP party. And of course, there was always time to catch up on one's computer hacking.
