The summer's major news: Overcrowding not severe

(Continued from page 1)

Edward Mason has been ap-
pointed to the Nuclear Regula-
tory Commission. Prof. Norman
C. Rasmussen will lead Course
23 into its first undergraduate
degree program in the 17 years
since its founding.

---

On the scientific side, mol-
ular exaptment was generated for 10^-14 seconds by the crea-
tion of a "nuclear molecule." A

group including Physic Prof.
Eric Cosman and some graduate
students bombarded a stationary
nuclear nucleus with accelerated
magnesium nucleus. Physicists
have been looking for this object
for 20 years.

-- Howard J. Wernicke, 19, a
MacGregor resident who would
have been a sophomore, was
killed in an automobile accident
in his hometown, Evansville,
Ind., on Aug. 22. He was alone
in the car.

--- Richard Cabeen of Illinois

took his own life on July 27. He
would have been a sophomore.

--- New people were named to
the Dean for Student Affairs
office to ensure continued good
efforts are underway to pro-
mote cooperation between the
RIO budgets seems threatening.

Still, officials said the long-
term trend of increasing dormi-
yory R/O activities and the
drawing power of New House
would affect fraternities. The
effect did not seem significant.
