Robbins cites 'military nature' Taiwan changes recommended

By Mike McNamee

An administration investigation has uncovered evidence of a 'military nature' in the Taiwan guidance systems program, according to a statement released by MIT officials yesterday. The investigation, based on allegations of an MIT program training Taiwanese students in the design and development of inertial guidance systems, has prompted MIT to initiate a review of the program's objectives and to consider possible changes.

The Robbins Committee

The Robbins Committee, which was established in response to charges made by MIT's Ad Hoc Committee on Taiwan, has recommended that MIT's program training Taiwanese students in inertial guidance systems be terminated. The Robbins Committee, chaired by Professor Jerome B. Wiesner, was formed to investigate the allegations and make recommendations regarding the program.

Evidence of 'Taiwan spy network'
