INSIDE

The varsity lacrosse team defeated Brandeis, 10-6, in its final match of the season last Saturday, Al O'Connor '79 and Phil MacNeil '79 contributed three goals each to lead the Engineers' scoring attack, while goalkeeper Jeff Singer '77 was outstanding. The win gives Wellesley's 1990 students something to look forward to after a successful season.

Laurel Fisher '76, a Nutrition and Food Science major, and Richard Mulligan '76, a Biology major, have won the John L. Asinari Award for outstanding research in the life sciences. The award was created by Mrs. John L. Asinari in memory of her husband, a member of the class of 1975 who died on March 22, 1975, of wounds allegedly inflicted by a group of local youths.

A crackdown by Massachusetts Bay Transportation Authority (MBTA) police has resulted in 23 arrests of pickpockets and nine arrests of people trying to cheat the MBTA bus fare system by using forged MBTA employee passes. MBTA Police Chief Edward E. Kenney announced yesterday. The crackdown on pickpockets on the MBTA buses has cut complaints of pickpocketing almost by half, in the first four months of 1976, he said in a report to the MBTA Board of Directors.

Rep. Les Aspin (D-Wisconsin) made public a CIA report yesterday that indicates the US Navy has outspent the Soviet Navy almost two to one in the construction of major warships. According to Aspin, the Navy had been pushing a misleading picture to "stampede Congress into approving a huge ship-building program."

The industrialized world must free itself from the "mental fixation" that a high quality of life requires high consumption of energy, a MIT professor asserted yesterday in an address before a conference on energy consumption in Oslo, Norway. Professor Carroll L. Wilson, Mitsui Professor in Problems of Contemporary Technology, spoke at the conference. An International Forum for Increased Energy Economy organized by the Norwegian government leaders in Norway, explained that we've never tried to apply modern technology to securing a maximum of comfort and freedom with a minimum of energy. When we do, the professor said, we find that we will sacrifice some exciting and pleasant surprises.

Allegations by a Wellesley student's parent of "sexual immorality, promiscuity, unhealthy and unnatural sexual habits being taught 24 hours a day and seven days a week" at Wellesley in the national spotlight.

John W. Galbraith, whose daughter Rachael is a Wellesley senior, sent a letter to the parents of each of Wellesley's 1990 students asking for support of a proposal to "set aside at least one dormitory complex in which men and women are to be housed separately on the basis of sex; and return to dormitory life the problem which can no longer be ignored.

By Tina Krontiris

"No Smoking" signs in MIT dining areas and lecture halls have not alarmed smokers. In conversations with The Tech, the City of Cambridge ordinance that forbids smoking in public places, the Office of the Registrar began a few weeks ago to put up "No Smoking" signs in such areas.

A survey of students conducted last week indicates that very few smokers have taken notice of the "No Smoking" signs and also that very few non-smokers can breathe more clearly now than they could before the no smoking laws went into effect.

Of the thirty students interviewed only four were smokers, two of whom said that they had not noticed the signs, but that they usually did not smoke in classrooms anyway. The other two smokers were aware of, but will not obey, the no smoking regulations, as they find them ridiculous.

Many non-smokers expressed no complaints about smoking and seemed unaware of the recent smoking ban. Asked whether smoking in the classroom disturbs them, they said that they have noticed students smoking in class — although they did see some professors smoking.

The non-smokers who noticed the signs remarked that they have not seen the signs since the signs were put up. They find that usually smokers respond to personal pressure from non-smokers more than they respond to any signs. Many non-smokers - some of whom said they are allergic to cigarette smoke - are disturbed by smoke in cafeterias. "I can't relax when I eat; I eat as fast as I can and try to get out of there. The food is bad enough as it is and the smoke makes it disgusting," a non-smoker said.

From the side of the Institute officials, no one seems willing to actively enforce the no-smoking rule.

Asked whether he will actively enforce the rule, Associate Registrar Winston Flynn, who in cooperation with the MIT Action on Smoking and Health is putting up the signs, told The Tech: "No, because it is difficult for us to enforce it. Those who should enforce it are the instructors in the classroom."

A few professors who were asked whether they are doing anything to enforce the no-smoking regulations, said that they in their classroom said that unless a student complains, they do not say anything. However, they added, there is usually no need to enforce the rules.

S. E. Leonard, Assistant Manager of the Food Services, said that he is quite happy about enforcing the regulations in designated areas of the cafeterias. In an interview, he told The Tech: "You can't do anything. If you walk up to a person and tell him to stop smoking in that area, quite frankly, he'll tell you to go to hell. Or, if he is polite, he'll tell you that he didn't see the sign and that he'll remember it next time, but he won't put out his cigarette."

However, it is no longer possible for me to look the other way. Sexual freedom has led Wellesley's dormitory life and the problem can no longer be ignored.

The incident however, has caused some students to speak in favor of parents. Huber felt that more and more students are demanding to have the option [of having modified parietals]. She also asserted that "we aren't trying to make the sexual decisions, and I think that guidance is needed." Anna Marie Hayes, mother of a freshman, said that she was "not happy with the amount of freedom allowed, but Wellesley is in step with the times."

Mrs. Catherine Austin, also the mother of a freshman, felt that Galbraith's letter represented a swing away from the liberal 1960's. "I think that he may have gone too far, asking the school to do too much," "Personally," she said, "I have a great confidence in my daughter. I think that she is becoming a fine young lady, Mass.

Wellesley debates charges of sin

What are you going to do, call the police?" Huber said.

Harvard University is far behind MIT in taking any action on its smoking regulations. The Office of the Dean of the Faculty of Arts and Sciences said that the matter is still under discussion and that nothing is being done yet.

Not all the "No Smoking" signs are up at MIT, but they will eventually, promises the Registrar's Office.

This model of the Hindenburg didn't fare too much better than the real thing — it fell to the floor of Lobby 7 on Friday, the same day it was put up. The Hindenburg was a German airship (dirigible) that burst into flames over Lakehurst, New Jersey, on May 6, 1937, killing 36 people. By Saturday, the model of the Hindenburg was gone.
