DNA panel granted extension

(Continued from page 3) MIT's situation with respect to the moratorium was essentially unchanged since the summer, since plans for compliance with the NIH guidelines would have to be complete now even if there was no moratorium.

The Cambridge Laboratory Experimentation Review Board, which was set up by the Cambridge City Council at the time the moratorium was approved, requested that the moratorium be extended for another 90 days. This request was approved unanimously by the council.

Daniel Hayes, chairman of the Review Board, said that the extension was requested in order to give the Board more time to investigate the safety of the research, and to allow it to examine the preliminary draft of the NIH Environmental Impact Statement on Recombinant DNA research, which was just released.

Acting Commissioner of Health and Hospitals Travello L. Comunale informed MIT of these reasons in a letter to Milne dated Sept. 27.

Milne said MIT had not specifically asked for the extension, but that MIT understood the need of the Board.

"We have been cooperative with requests of the Board to examine the review procedure" which is being set up at MIT to oversee recombinant research, Milne added.

Provost Walter Rosenblith said "we have always cooperated with the city, and intend to do so further." He stated that once the safety questions raised by the moratorium were satisfied, the investigators should have freedom to do experiments.

MIT is making its facilities up to date, and hopes that by the time the renovations are complete, the City of Cambridge will give approval for the research involved, according to Rosenblith.

Luria said that as director of the CCR, he felt his responsibility was to "make sure that the facilities are available" for research, but that what "to do or not to do" in terms of actual research must be decided by MIT.

Graduate Research Assistantships in Civil Engineering

The Department of Civil Engineering at Princeton University invites applications for graduate study and research in the areas of Structures and Mechanics, Transportation, and Water Resources leading to M.S.E. and Ph.D. degrees. Annual research stipends start at $4,240 plus tuition and are offered to all admitted students requesting support.

Greyhound...and leave the driving to us.

How much foam on a glass of beer?

Maybe you like your beer without a lot of foam.

So you pour it gently down the side of the glass.

Well, that's fine — that's fine. But you might be surprised at how much mousse and smoothness the flavor becomes when you pour your beer smoothly down the middle.

If you think this looks good, just wait till you taste it!
