New high school program starting

By Glenn Browneve

"Every summer, a group of high school students attend a nonprofit, college-preparatory program in the city of Boston during the summer months. This program, known as MIT Summer Studies Program (SSP), is designed to provide a comprehensive educational experience for students interested in pursuing careers in science, technology, engineering, and mathematics (STEM) fields. The program offers a wide range of courses and activities, including lectures, workshops, and hands-on projects, all aimed at fostering critical thinking, problem-solving skills, and a deeper understanding of STEM disciplines. Participants have the opportunity to interact with faculty members and guest lecturers, expanding their knowledge and gaining insights into potential career paths.

High School Studies Program conducted during the school year, Exploration will be held in one of the three campsites.

According to Exploration's program director, Dr. David Falcone, the program is designed to interest female high schoolers in technological fields and to provide them with exposure to university-level coursework. The program is open to female high schoolers, and participants are encouraged to apply, as the program is selective and highly competitive.

The program offers a range of courses, including computer science, engineering, and mathematics, and participants have the opportunity to work on projects and receive guidance from experienced faculty and staff. The program is designed to be challenging and engaging, providing students with a unique learning experience that will prepare them for future academic and professional endeavors.

As presently designed, the program will bring 180 students to a university campus four days a week for four weeks to participate in workshops, seminars, and field trips related more to college curricula than to traditional high school studies. Two sessions will be held, one each in July and August.

According to Exploration's program director, Dr. David Falcone, the program is competitive and highly selective, with a limited number of spots available. Participants are encouraged to apply, as the program is designed to provide a comprehensive educational experience for students interested in pursuing careers in STEM fields.
