The panel informed Cambridge that Kendall was an excellent site for developers, and that the city should move quickly to make the final preparations for development, including street closings and land preparation. The ULI panel also warned that the city's plan would be difficult to develop housing in the area as part of the initial phase of the project.

If the City Council acts on the amendment updating the Urban Renewal Plan, concrete proposals from potential developers may be expected almost immediately. The Cambridge Redevelopment Authority has employed a firm to do marketing studies, and based on talks with over 50 potential developers, the firm is highly optimistic about the prospects for the area.

The Great Intel Talent Search is on.

It took some pretty exceptional talent to take Intel to the number one position in semiconductor technology. And it's going to take even more to keep us at the focal point of significant technological change. That's why we're conducting a talent search. The competition is bound to be tough, but the rewards are substantial. For instance, as an Intel engineer, you'll work in an environment where individual contributions are encouraged, recognized and rewarded. In addition, you'll be eligible for stock options and stock participation plans. And equally important, you'll be treated to the highly desirable lifestyle of the San Francisco Peninsula.

If you're about to receive your B.S., M.S. or Ph.D. in electrical engineering, computer science or a related field and have particular strengths or interests in digital devices or microcomputer development (hardware/software), we can offer you a wide choice of product areas...memory products, microcomputers, memory systems or consumer products. Fill out the form below for our on-campus interview dates. Why not get your act together and make an appointment to talk with us?
