- The Tech Classified Ads Work! 9:30 to 4:30 weekdays, fast service. Call 694-2484.

**There's a lots of living and living ahead**

- Armco has a free booklet to help you get a job. Use it to set yourself apart. Send for your free copy of How to Get a Job. Write Armco Steel Corporation, Educational Relations Dept., General Offices, U.S. 22, Middlesex, Ohio 43013. Our supply is limited, so write now.

**How the energy crisis chills your chances**

So you're getting your degree and looking for that perfect job. More power to you. Literally. You'll need it. America will have to find the energy it takes to make you a job.

Expressed as heat, this nation spends at least 7 quadrillion BTUs a year. That's a glacier thirteen miles long. Each working man and woman's share of our 71 quadrillion BTUs is huge. But so far, we're paying too much for this energy.

**Free—Armco's plain talk on how to get a job**

We've got a free booklet to help you get a job. Use it to set yourself apart, above the crowd. We answer key questions you'll need to know. Like why you should hold on to your qualification. What to do after the first interview. Hints to make you a more aggressive, attractive job candidate. All prepared for Armco by a consulting firm specializing in business recruiting. With help from the placement staff of a leading university.

**Plain talk about energy**

We Americans already know how to solve the energy crisis. We have the technology to reach solutions. Yet each solution comes with its own set of political problems. Natural gas mustn't spoil our beaches. Coal mustn't threaten to destroy the land or poison the air. The atom mustn't destroy us. Energy conservation mustn't interfere with spending BTUs for worthy reasons. Fair enough. But so far, we're paying more attention to the problems than to the energy itself. We've got to stop making every social goal an ideological crusade. We need to think things through and make rational trade-offs if we ever are going to use those 18,000 additional jobs.

Next time some zealots crusade for anything, try this judge against this question: Does it produce at least one BTU's worth of energy? If not, how's it doing a thing so help you get a job?
