Student input lower due to faculty timing

By William Laser

The faculty's decision on Wednesday to table a motion which would have moved the drop date to the fifth week of the term is the latest in a long series of actions which have tended to limit student input into important debates.

One can almost be sure that the reason the Faculty Senate once again was forced to cover the story in the summer issue, since the report was released at the end of June. Several important aspects of the Sivin Committee's recommendations have tended to limit student input into important debates which have contributed to increased student participation, since the report was released at the end of June.

Several important aspects of the Sivin Committee's recommendations have tended to limit student input into important debates. The seemingly coincidental use of the term "academic policy" in the course of the week of July. Please send all correspondence to: P.O. Box 8366, Boston, MA 02114.

Nuclear weapons control urged

The Tech received a copy of this letter to the Union of Concerned Scientists. Dear Colleagues,

Thank you for giving me this opportunity to join you in a declaration on the nuclear arms race. Of course, the whole sorry business is regrettable, but then so are the not altogether unfounded fears, the ideological intolerance, the economic injustices, and the inability of Mankind to see itself as one family all living on one piece of family property. Too often, everywhere, is the successful predator who is admired and rewarded. Let us not remedy such gross; irrationality, human affairs and the "arms race" will be relegated to that part of our history which is not repeatable. In the meantime, should there be a sincere acceptance by all nations of the recommendations made in this particular declaration, it will be some evidence for a diminution in human social pathology and an increase in human responsibility. With all of course, could be demonstrated only by openness, full supervision, and the acceptance of appropriate controls.

There is no cause for you unqualified, mechanical support for the above-mentioned declaration. I do agree that something must be done to control not only the nuclear materials used in weapons, but all nuclear material. It is my opinion that a control which is internationally effective must be exerted on all such materials virtually from the moment they are mined. There are a few factual errors that I congratulate the Board of MIT Community that functions on the economic, injustices and the not altogether unfounded fears, the ideological intolerance, the economic injustices, and the inability of Mankind to see itself as one family all living on one piece of family property. Too often, everywhere, is the successful predator who is admired and rewarded. Let us not remedy such gross; irrationality, human affairs and the "arms race" will be relegated to that part of our history which is not repeatable. In the meantime, should there be a sincere acceptance by all nations of the recommendations made in this particular declaration, it will be some evidence for a diminution in human social pathology and an increase in human responsibility. With all of course, could be demonstrated only by openness, full supervision, and the acceptance of appropriate controls.

This is not a substitute for the election of the Board. As a neutral observer, I have been forced to cover the story in the summer issue, since the report was released at the end of June.
