Winter aggravates sports facility crunch

By Tom Carter

The arrival of winter has once again emphasized the need for new athletic facilities at MIT. In particular, the skating rink has had many problems staying in working order and appears to be on the verge of death.

The major problem with the rink is that it was designed to have only a ten to twelve year lifetime. However, on January 8, it will begin its 23rd year of operation (that is, if it does not break down again before then).

Even if the rink were in good operating order, there would still be problems. Being an outdoor facility, the rink is at the mercy of the weather. When the weather is warm, nothing can be done to keep the ice frozen. Of course, this can work both ways. In fact, recently, the only reason the rink was open was the cool weather since the pipes were not working properly.

Washing a mile can be a sickening experience. In fact, recently, the only reason the rink was open was the cool weather. What then is to be done to solve the problem? The MIT administration has realized that the problem is here for some time.

The MIT problem is not unique. There are other problems of alumni funding. In fact, the pool is one 25-yard pool is just not adequate for the 18,000 members of the MIT community. The MIT pool is not even close to adequate for the 18,000 members of the MIT community. The MIT pool is not even close to adequate for the 18,000 members of the MIT community.

We are struck with an idea on the College could be made by the creation of an indoor, indoor, and a swimming pool. However, virtually nothing has been done towards construction of the athletic complex because of the lack of alumni funding. In fact, the present rate of contributions is barely keeping up with inflation.

The problem of the MIT pool is not unique. There are other problems of alumni funding. In fact, the pool is one 25-yard pool is just not adequate for the 18,000 members of the MIT community. The MIT pool is not even close to adequate for the 18,000 members of the MIT community.

What then is to be done to solve the problem? It is true that the MIT administration has realized that the problem is here for some time.
