Carter's energetics not Coolidge's style

By Bob Wasserman

When asked at a Washington press conference last week why the president isn't as popular as such a great leader, Carter answered that his Administration had suffered a popularity due to its willingness to tackle tough issues.

Prior to Carter's rise to the presidency, it was thought that the president's popularity was due to his ability to make tough decisions. However, Carter's approach to governance has been more focused on the economy, which has led to a decrease in his overall popularity.

In recent years, the economy has been a major concern for many Americans, and Carter's efforts to address it have been lauded. However, some critics have suggested that his approach has been too focused on the economy and not enough on other issues.

Carter's energetic style is a far cry from Coolidge's more laid-back approach to governance. Coolidge was known for his relaxed approach to work, often spending long periods of time at his desk. This style of governance is in stark contrast to Carter's more hands-on approach to the presidency.

In conclusion, while Carter's energetic style has brought him some popularity, it has also led to some criticism. Coolidge's more relaxed approach to governance has been praised for its effectiveness, and it remains to be seen whether Carter's style will be as successful in the long run.
