China Syndrome: an electrifying film

Jack Lemmon faces an engineer's dilemma - a fight fair, while the bad guys use every vile means at their disposal to crush any opposition, while the good guys struggle to save the world through their intellect. Lemmon's character, a corporate executive who's ordering the nuclear power plant to shut down, is as gripping as the story's backdrop, the hypothetical Ventana Power Plant, while filming for a feature film. The character of Jack Lemmon is a very intelligent, articulate person, while the supporting cast, including Faye Dunaway, constantly receives an admonishment, "not to worry your pretty little head." The audience is drawn into its tangled web of intrigue, as the story utilizes the backdrop of the nuclear power industry and its impact on society. There are really two ways to judge this film, one from the standpoint of the audience who's watching the movie for the first time, and the other from the standpoint of the corporate executive who's ordering the plant to shut down. The China Syndrome is a must-see. For those who missed it in the movie theaters, it's available on video and is机关。
