The Tennessee Valley Authority's nuclear facility, near Bellefonte, Tenn. The question of safety at nuclear power plants, such as this, has been raised following the Three-Mile Island incident. (Photo by Hans von Spakovsky)

Rasmussen comments on nuclear safety

By Joel West

The MTRA opened a new $5.1 million temporary station Friday March 23. The new station, dubbed "the single largest concern (in the country)" by Barry Newman, the director of the Committee on Corporate Joint Advisory Committee (CJAC), was the result of a two-part review process, and was considered to have a substantial supply. Amounts of equipment and so forth were never to be more than a few thousand dollars, all to be dealt with in a way that would not affect the overall economy. The new station will continue to operate effectively, and would not be a full time business. The MTRA is currently studying the issue and would like to see the technology develop further.
