**Stallworth leads Steelers to win**

By Robert Lahme

The city of Pittsburgh should be proud of itself with championship teams in both baseball and football. Such multitalented cities are rare, and the fans deserve recognition.

The Steelers came into last Sun-

The Super Bowl game as 11-

point favorites and left as 12-

point winners. The Pats played well, even the most ardent Steeler fan would give them credit. Vince Ferragamo proved his reputation with fine performances, and the inability to hold the Steelers to fewer than three touchdowns. I might have guessed that the better quarterback day despite Bradshaw's receiving the MVP award.

Bradshaw showed flaws in the game Sunday. Clearly, his three intercepted passes did not help the Steelers' cause. Perhaps John Stallworth's brilliant over-the-shoulder catches had to be brilli-

ant or they wouldn't be catches. In other words, have you ever wondered whether some of Bradshaw's passes were not salvaged by great wide receivers such as Swans and Stallworth and turned into great pass plays?

(Continued from page 20)

Since there are no Division III teams close enough geographi-

cally to compete against, the Engineers are forced to challenge Division I talents and their records reflect their competing out of their Division. The men will be working to be in top form for the New England Cham-

pionships which will be held at MIT on March 1.

**How you can change the world in 25 years or less.**

Let's face it. In 25 years or less, the world of energy as you know it, will be entirely different. So will we.

Today, we're a leader in the petroleum industry. Tomorrow, who knows? That is why we hope to be meeting their energy needs as well. We've committed 90 million dollars this year alone to research and development programs that read like science fiction.

We've got Earth sciences. Mining and milling uranium. Solar research, Geothermal energy development. Even new technology to produce fuel from coal; and synthetic crude oil from tar sands and oil shale.

And while the whole, we're still looking for ways to squeeze every drop out of old oil fields. And continuing the important search worldwide for new ones.

If you're also committed to changing the world, to making your mark on the energy frontiers ahead, we'd like to talk to you.

Jonathan S. Schwartz '81, Area Development Coordinator, today, care of Standard Oil Company of California, 225 Bush Street, San Francisco, California 04104. Or see our recruitment team when you visit your campus.
