Faculty accepts sex comm. report

By Gordon Hunter

The faculty endorsed the report and recommendations of the Ad
Hoc Faculty-Student Committee on Sexual Harassment at
Wednesday's faculty meeting.

Professor of Computer Science and Electrical Engineering Peter
Ellis, chair of the committee, spoke to the approximately 60
people present about the findings of his group. He said that current-
ly there is little concrete and well-defined informal procedures
to deal with harassment complaints, but that there was "inadequate statement" of these policies on the campus.

The committee's report urges the administration to take a
"barrier characteristic" that has protected the complainants, ac-
cepting sex comm. report

Chancellor Paul Gray '54 stressed to the community is very impor-
tant for dealing more effectively with the problem of sexual harass-
ment.

The faculty also approved a new program in the Department of
Nutrition and Food Science called Metabolism and Nutritional
Human Nutrition (SM and PhD), the program will replace
various similar offerings in the department.

Provost Walter Rosenblith ad-
dressed the meeting about progress on improving the use of
computers and computation in
department.

Gray explains dining
reasoning

by Iran Feng

MIT Chancellor Paul Gray '54 personally addressed a meeting
of the General Assembly (GA)
Thursday evening, February 14,
on the administration's actions on
campus dining.

Outlining four basic premises of the proposal, Gray contended
that "the status is unacceptable," but stressed the impor-
tance of student meetings with ad-
ministration for feedback pur-
poses.

Gray first stated that MIT has a "responsibility to provide food
services to its students in a viable
manner at a reasonable cost." He
also indicated that health, safety,
and sanitary conditions must be
considered, which includes "not
cooking in areas not intended for
that purpose." The dining program
should also be one which complements the residence
program, and, finally, though some flexibility is good, the din-
ing system should be "physically
controlled," not by "gentle
Shallot," but stressed the impor-
tance of student meetings with ad-
ministration for feedback pur-
poses.

Gray concluded that although
there is a "limitation of flex-
ibility." (Please turn to page 15.)
