Several fraternities got together and began planning for what was to be primarily a "Greek" activity. This planning generated so many ideas that it became obvious that the weekend, if done correctly, would require much more labor than the initial group of fraternities could provide. The Spring Weekend committee was therefore expanded to include MIT fraternities and activity groups, as well as representatives from Wellesley and Simmons. The name of the weekend was changed from "The Greek Weekend" to the "Spring Olympiad," and it replaced Kaleidoscope as the officially A.S.A. sanctioned Spring Weekend of MIT.

World

4000 dolphins push back fishing boats — A group of about four thousand dolphins gathered around the island, Japan, on Sunday and forced fishing boats back to port. The fishermen on Friday had trapped and stabbed to death about 300 dolphins. An American environmentalist, Dexter Cate, was charged in Japan with obstruction after freeing dolphins from "The Greek Weekend." The Spring Olympiad had its origins in the mind of Andy Ubel, a graduate student at MIT. Over the summer he witnessed a Campus Carnival at University of Minnesota and felt that MIT could have a similar event. His idea might have come to nothing were it not for the cancellation last year of the annual Sigma Alpha Epsilon party. Because of the rise in the drinking age from 18 to 20, Rico, the company which normally supplied the SAE all-campus party, felt the college market was not lucrative enough and pulled out. Out of this social void was born the idea of a "Greek Weekend." Several fraternities got together and began planning for what was to be primarily a "Greek" activity. This planning generated so many ideas that it became obvious that the weekend, if done correctly, would require much more labor than the initial group of fraternities could provide. The Spring Weekend committee was therefore expanded to include MIT fraternities and activity groups, as well as representatives from Wellesley and Simmons. The name of the weekend was changed from "The Greek Weekend" to the "Spring Olympiad," and it replaced Kaleidoscope as the officially A.S.A. sanctioned Spring Weekend of MIT.

Nation

Defense computer unreliable — The computer system, called Warnings, designed to warn the President and the military of an enemy attack, is slow and "crashes" in critical situations, according to General W. R. Fox, the company which normally supplied the SAE all-campus party, felt the college market was not lucrative enough and pulled out.

This Ad Is Not For All Of You.

...It's for those of you who are bright and talented. Eager and aggressive. Analytical and inquisitive. At Physics International, there are the people we're looking for. More Engineers who will help us continue to be one of the most successful R & D companies in the West.

We are theoreticalists, experimentalists, designers and builders. We're known for our contributions in high voltage systems, radiation hardening, high power lasers, fusion research, precision explosive systems and rapid response sensors and actuators.

If you have an advanced degree in any of the following areas we have opportunities for you:

- **Physics**
- **Electrical Engineering**
- **Mechanical Engineering**
- **Engineering Physics**

We provide careers, not jobs and our managers will most likely grow with us. We will be on campus **THURSDAY, MARCH 20, 1980; sign up at your Career Planning and Placement Center.** An equal opportunity employer m/f.

**PHYSICS INTERNATIONAL COMPANY**

**STUDENT TYPISTS! PART TIME OR FULL TIME**

Here's a way to earn and learn at the same time... work a couple of days, weekends, or mornings on your own! You can earn some extra money... or convenient part-time hours...or in companies where you can reach the top fast. High hourly rates... as a beginner, and as you advance. In the area of temporary technical, financial, office positions and others... and paid on a weekly or monthly basis.

Call or come into Office Specialists.

120 Tremont St., Box 450, Reading, MA 01867

We're The Energy Systems Company.

Helping to develop the world's energy resources.

Extracting them, processing them, converting them, and delivering them for use.

We're C-E Power Systems, a $2.33 billion company that's been supplying equipment and technology for over 65 years. Approxi-

ately 46,000 employees are located throughout the United States and around the world.

C-E, helping to develop energy resources worldwide.

C-E Fuel Systems supplies the internals of nuclear reactors, such as the support plate into which over 800 tubes are rolled and welded (left); C-E Auto

equipped this gas production platform in the Gulf of Mexico with production processing equipment (center); C-E Lummus supplied the proprie-
tary technology for Brazil's largest petrochemical complex (right). (Co-Continued from page 1)
