The Company

Megatest builds the finest LSI testers in the world. Our systems test more microprocessors, EPROMs and Bubble Memories than anybody else. They have broken all industry records for performance. We've attained this standing in the industry while remaining a small, friendly, employee-owned company. How? By creating an environment that rewards creativity, effort and results, not politics, rank or tradition. And by emphasizing neat ideas more than neat desks and neat dress.

We've attained this standing in the industry while remaining a small, friendly, employee-owned company. How? By creating an environment that rewards creativity, effort and results, not politics, rank or tradition. And by emphasizing neat ideas more than neat desks and neat dress.

The Job

We are now designing new test systems which will handle the "super-chips" of the future. These systems will require astoundingly powerful computers and near-perfect analog support circuitry. They will be specified in terms of picoseconds, nanoseconds and gigabits.

We need people with as much potential as our new systems in the following areas:

Computer Scientists (especially UNIX language processes, interactive development tools)

Analysts and Digital Engineers (high-speed ECL gate arrays and hybrids)

Applications Engineers (combines technical and marketing skills)

The Potential

The range of professional opportunities at Megatest is almost unlimited and we've perfected a management style that makes it possible to move freely among them. You follow your instincts and ambitions. If you've got potential you can unleash it at Megatest.

We will be interviewing March 30 and 31 at the Placement Office, or call Dave Mittereder at (408) 986-1708. Don't bother dressing up for the interview.
