The College of Computing at MIT plans a new undergraduate course in cognitive science. The course, to be called "The Social Responsibility of Engineers," is being developed by Professor Daniel M. Bromberger, who is the associate department head of Electrical Engineering and Computer Science.

Bromberger said that MIT is the only university to have such a course. The course will be offered in the fall of 1982 and will be open to students in the College of Engineering, the School of Architecture, and the School of Humanities.

The course will focus on the role of engineers in society and will cover topics such as the history of engineering, the role of engineers in society, and the impact of engineering on the environment. The course will also cover the ethical responsibilities of engineers, and will include case studies of engineering projects that have had significant social and environmental consequences.

The course will be taught by Professor Bromberger, who is also the director of the MIT Center for Technology and Society. The course will be offered in conjunction with the MIT Institute for Advanced Study, and will be available to students in the College of Engineering, the School of Architecture, and the School of Humanities.

The course will meet on Tuesdays and Thursdays from 10:30 to 11:30 am in room 10-250. The course will be limited to 20 students, and enrollment will be by permission of the instructor. The course will be offered in the fall of 1982 and will be open to students in the College of Engineering, the School of Architecture, and the School of Humanities.
