Institute labs look for new funding sources

By John J. Ying

A national survey re- ported a 39 percent drop in the enrollment of low-income stu- dents at private colleges and univer- sities between 1979-80 and 1981-82, "not to the greatest extent," according to the MIT report.

The report noted that "the MIT's cost is not supported by a large proportion of students who have been low-income students to the extent that they have been affected "because we have not been one of the fortunate few who have been able to find fund- raising from the private sector. But we have not been so lucky, the lack of activity we have now could not be sustained."

Walter Milne, Special Assistant to the President, commented: "Most of these [research labs] have been supported partly or entirely... but there are problems everywhere.

MIT retains low-income fresh

The report noted that "the MIT's research is not supported by a large proportion of students who have been low-income students to the extent that they have been affected "because we have not been one of the fortunate few who have been able to find fund- ing from the private sector. But we have not been so lucky, the lack of activity we have now could not be sustained."

Walter Milne, Special Assistant to the President, commented: "Most of these [research labs] have been supported partly or entirely... but there are problems everywhere.
