Dense pack plan gets Reagan nod — President Ronald W. Reagan announced yesterday his support for placing the first 100 MX missiles in a dense pack formation. The plan calls for the superhardened missile silos to be concentrated in a 15 mile long, one mile wide strip of land in Cheyenne, Wyoming. The plan is based on the theory that the blast, debris, and radiation from Soviet warheads would cause them to destroy or deflect each other, enabling many of the American weapons to survive for a retaliatory strike.
