Sailors react to MDC windsurfer ban

(Continued from page 1)

Director of Environmental Quality, Alfred Ferullo, said he "can't recall anyone asking me any questions" at the commission meeting held to determine the extent of the ban. Ferullo did explain the water classifications there, but says "I was just there as an observer." Representatives of the Marine Division were also at the meeting, but the vote was limited to the commissioner and the four associate commissioners. "The overwhelming consideration seemed to be one of legal liability in case someone drowned, since there are no lifeguards there," Ferullo said.

Women's sailing coach Stu Nelson said he did not know of any illnesses caused by contact with the Charles "although we all fall in." Nelson, a boardsailer himself, added, "That's one of those myths they tell freshmen, "You can walk on it.' We feel like saying 'The Charles is so polluted you can walk on it.'" Nelson said he did not know of any such beginner is Lina Janavicius G, a three year veteran of the women's sailing team. "It's a sure," a view prevalent at the commission meeting held to determine the extent of the ban. Ferullo did express his concern. "I've never gotten sick or known anyone who has."

Janavicius feels that the ban was due to "motorboat pressures," a view prevalent at the sailing pavilion. "I don't think the motorboats should be any more inconvenienced by the sailboards than by the regular [sail]boats, especially smaller ones like Lasers."

HP gives MIT $3M equipment

(Continued from page 1)

Hewlett-Packard 9836 personal workstations. SCHEME is a dialect of Lisp, a symbolic artificial intelligence computer language. Fifty of the computers will have four megabytes main memories. In 6.004, the machines will be used to give students an introduction to programming in microcode, the lowest level computer language. In the past, students in code - the lowest level computer language. In the past, students in engineering computer language. Fifty pieces of equipment used to give students an introduction to programming in microcode, the lowest level computer language

The finest all cotton chino pant you can wear. Made expressily for the Coop in 100% combed cotton with all the construction features found in better tailored slack - full fabric French front, Ban-roll (R) stitched down waistband, full-faced pockets so you don't see the lining and buttoned flap pocket.
