If there's one thing business students have always needed, this is it: an affordable, business-oriented calculator. The Texas Instruments BA-35, the Student Business Analyst. Its built-in business formulas let you perform complicated finance, accounting and statistical functions—the ones that usually require a lot of time and a stack of reference books. And unlike present and future value calculations, amortizations and balloon payments. The BA-35 means you spend less time calculating, and more time learning. One keystroke takes the place of many. The calculator is just part of the package. You also get a book that follows most business courses: the Business Analyst Guidebook. Business professors helped us write it, to help you get the most out of calculator and classroom.
