Column was to provoke discussion

- Actually, my description of the cartooned Kampf even tries to dem-
cates a change in this picture. It

Feedback Conference was not anti-Israel

To the Editor:

Ellen L. Spero's responsible re-
port of the exchange between MIT Professor Louis Kampf, fac-
tual editor of the March 9 edi-
tion on the Middle East, and MIT Zionist Alliance president Judith Edelstein [Fed. 28] did not
ruin my day. By egging Fliech-
man to make a point, I was not
intended, these columns have occa-
lutely, these columns have occa-

Column is funny

To the Editor:

In an "Editor's note" to a recent
letter from Oren Hallock '87 (Fed-
back, Fed. 28), the following
statement appeared: "The Tech's pol-
icy is... to permit members of the MIT community to present their views, whether or not they please that same
community."

Just a minute here, guys. Now I enjoy the fun other people had when they got to flame mercilessly at both him and The Tech. I know from speaking with Simson that he is not as offended as many of his antagonists have to say (at least not superficially, any-
way). In the same sentence, there was nothing wrong with the whole sit-
uation. It was pleasant banter,
directed at bad form (of paranoid racist). Kampf even tries to dem-

the technology. Let people laugh with Simson L. Garfinkel instead of at him, for a change!

Mentor Graphics Corporation will be on campus March 19th for campus interviews. Personal interview sign-ups are now underway.

Whether your interest is hardware or software development, software quality assurance or computer science we have an oppor-
tunity for you at our corporate headquarters in Portland, Oregon or at our division office in San Clara.

We're known for our innovation in the development of computer-aided engineering systems for circuit and/or digital designs. From initial high-level conceptual design, Mentor can use its powerful design automation and accelerate the entire product development cycle. Putting it's significant increase in engineering productivity and quality control.

Computer-aided engineering is the technology of the future. We brought it to this point. You can take it further.

Our is a highly charged creative environment, rich in challenge and professional growth. In addition to generous salaries and comprehensive benefits, we provide our people with rewards for high achievement and a future worth pursuing. For the complete Mentor Graphics story and the part you can play in it, sign up for our personal interview at the College Placement Office. Your future could be riding on it.
